VENTA Launches Low Speed Electric Vehicle Pilot Program For the United States Federal Government

Partnership with EVCARCO Includes Investigating Military Applications

DALLAS – March 06, 2010 –VENTA, the nation’s leading firm finding, developing, and distributing environmentally friendly products and technologies in the automotive arena, announced today that it is launching a pilot program with the United States Federal Government to bring energy-efficient low speed electric vehicles to the nation’s military and government fleets.

“This is an exciting step towards deploying more energy-efficient electric vehicles in the nation’s largest vehicle fleet,” said VENTA Chief Executive Officer Dmitri Tisnoi. “It could unlock substantial distribution and revenue opportunities for our firm.”

In partnership with Dallas-based EVCARCO, the new pilot project will allow federal government and military use of low speed electric vehicles for common activities such as search and rescue, threat assessment and government institution protection. The specially made long range vehicles are being uniquely designed to meet strict military and GSA standards.

“We understand the performance needs of vehicle protecting our nation, its military and the citizens,” said Dale Long, Chief Executive Officer of EVCARCO “We are excited to be granted this opportunity to showcase the advanced lithium ion-based vehicles we distribute.”

About VENTA

VENTA Inc. (www.ventainc.com) is dedicated to finding, developing, and distributing environmentally friendly products and technologies in the automotive arena from all over the world to a network of car dealerships and other automotive end users. The company aims to establish its brand presence as the mass distributor of top-selling Electric Vehicles (EVs) in the marketplace available today.

About EVCARCO

EVCARCO (www.evcarco.com) is the first automotive retail group dedicated to deploying a coast-to-coast network of eco-friendly dealerships and vehicles. EVCARCO is bringing to market the most advanced clean technologies available in plug-in electric, hydrogen fuel injection, and alternative fuel vehicles. EVCARCO has developed a dealer network allowing growth into most US States by 2012.
